*Effects of Bite.*—An account of the fatal results from a bite of a male of this spider, and the circumstances surrounding it, is here given as it appeared in *The Sun*, Wednesday, 23rd February, 1927.

The story of how a spider bite proved fatal was told at the Hornsby Coroner’s Court to-day, when the District Coroner (Mr. H. Richardson Clark) held an inquiry into the death of a baby boy, Clyde William Thompson, of Thornleigh. Constable Harmer, of Thornleigh, said that on February 15 the little boy was sitting on the laundry steps, with his parents close by, at their home in Clifford-avenue, Thornleigh. Suddenly with an agonising scream the child jumped up. Mrs. Thompson picked him up and hurried him into the kitchen.

Constable Harmer produced the spider—a big black one. He said that the museum authorities had told him that it was a trap-door spider. Euclimena thiballs Rainbow. This was the first case on record of a person dying from the bite of a trap-door spider. He was of the opinion that the child was crushing the spider in his hand when it bit him.
Themes

• discipline and nutrition
• sanitation and segregation
• humans and nonhumans
• practitioners and patients
• alcohol and morality
• lifestyle and status
Discipline and nutrition

- Sydney as a supervised settlement
- Centralised institutions and responsibility
- Governors (ex-) naval or military until 1867
- Individual and public health = healthy colony
- Convicts as workers rather than prisoners
- Immigrants instructed to be successful settlers
Managing convict health

Augustus Earle, *Views in New South Wales* (1830).
Health and sickness, 1800–80

• Airs, waters and places
• Dirt and light
• Climate
• Contagion
• Constitution and diet
• Morality, class, temperance and vice
Health and the fabric of Sydney

James Maclehose, *Picture of Sydney and Strangers' Guide in NSW* (Sydney: James Maclehose, 1839), opp. p. 117
Public health?

• Food and drink
• Industry and trade
• Sanitation and sewerage
• Quarantine – human and animal
• Vaccination and castration
• Hospitals and asylums?
• Education and publicity?
Rations and shipboard hygiene

*Illustrated London News, 17 August 1850.*
## Hospitalisation in Sydney, 1819–59

Sanitation and segregation

- Geographic isolation as blessing and curse
- Disease as individual and environmental
- Morality, class and race govern sickness
- Quarantine the primary barrier to contagion
- Epidemic threats justify civic intrusion
- Disease reshapes the city and its denizens
Class and race, morality and dirt

James Maclehose, *Picture of Sydney and Strangers' Guide in NSW* (Sydney: James Maclehose, 1839), pp. 164–6
Colonialism and biological invasion

Surveilling the sick city

University of Sydney Department of Archaeology map store
Humans and nonhumans

- Human settlers never arrived alone
- Creatures carry, suffer or represent disease
- Microorganisms emerge as prime threat
- Animal trades are forced from the city
- Vaccination never mandatory, always contested
- Germ theory follows rather than leads health
Health and sickness, 1880–1950

- Climate and cleanliness
- Germs and pandemics
- Vectors and disease ecologies
- Immunisation and medication
- Infant and maternal welfare
- Cancer
Rats, lice and history

INSPECTION OF VESSELS FOR EVIDENCES OF RATS AND MICE.

The following places should receive special attention whenever a vessel is examined for traces of infestation by rats and mice:

1. Galley, bread lockers, and larder house (if any).
2. Servory, pantry (if any), and vegetable lockers.
3. Food store rooms, particularly bread stores, flour stores, and other places where soft stores are kept or handled.
4. The disposal of food refuse should be inquired into and the garbage receptacles inspected.
5. Saloons and mess rooms.
6. Boats, casings of steam pipes, rudder chains, &c., vegetable lockers on deck, and other possible shelter places on deck or in upper works.
7. Bulkheads and partitions for traces of runways along pipes or otherwise.
Local threats?

When a young woman is rushed to a Sydney hospital suffering from a snakebite, she's lucky to be treated by Annika Niebuhr, a doctor whose fascination with serpents began with the Norse myths of her Danish childhood. Annika recognises the bite of a taipan - the world's most poisonous snake, but not one native to Sydney - and realises it can only have been planted.
Domesticates and disease

The triumph of medicine?

Data from *Australians: Historical Statistics* (1987), p. 58
Practitioners and patients

• Social status of doctors rises only slowly
• Hospitals shift from community to government
• Wellness replaces health
• Individuals made responsible for wellness
• Healthcare expands but paternalism questioned
• Size and complexity of city threatens responses
Intensive care

Public hospitals and patients in NSW, 1891–1980

- HIV/AIDS 1982–
- BSE/vCJD 1987–
- SARS 2002–03
- Equine flu 2007
- Ebola virus 2014?

Sydney’s funnelwebs are irradiated by contaminant from a US submarine and wreak havoc in a city of fear.

Scientist Jack Fitzgerald and journalist Helen Parkes join forces against the nationally spreading nightmare. But in the corridors of power as in the panic-stricken streets, the descent into barbarism is as chilling as the horror of the spiders.
